

Safety Management Manual

It is vital for professional contractors to have safety as a top priority to protect themselves, their employees and customers. NAAC members have free access to an online Safety Management Manual so they can get all their paperwork and planning in place. The health and safety of everyone involved in a business is a legal and moral duty and, if there are 5 or more employees, the policy must be written down.

Writing a safety policy, and gathering all the documents together to ensure your company is legal and safe, can cost thousands of pounds and many hours spent in the office. This is made much easier with the NAAC's help.

The NAAC online Manual is easy to navigate and members can work through click by click, starting with downloading a checklist so they know exactly what is needed.

National Association of Agricultural Contractors

By the end of the process you will have:

- Created your own Health and Safety policy by customising our template
- Defined responsibilities and identified emergency contacts
- Written Method Statements describing how each job will be completed safely
- Carried out and documented Risk Assessments for all areas of your business
- Pulled your Emergency Procedures together using templates for fire, accidents and hazards
- Carried out CoSHH assessments if you work with Hazardous Substances
- Set up PPE records, and filed induction and pre-employment health check paperwork
- Recorded inspections of all your vehicles, machinery and equipment

In addition, NAAC members have access to:

- Over 70 useful resources, including documents, templates and links to advice
- Around 20 'Toolbox Talks', which are bite-sized training sessions for you to run internally when the need arises
- Guidance from NAAC about how to put your own Safety Manual together
- Advice from a qualified Safety Consultant on the trickier aspects of safety, giving free first-base advice to members

Have you got your safety policy in place?

Agriculture has the worst fatal injury (per 100,000) of the main industrial sectors.

Over the past five years, one person has died per fortnight working in agriculture.

Accidents can have a massive financial impact on a business, and can result in prosecution.

Many fatalities in the past 5 years have been related to vehicle and machinery use.
